List of composing Concepts

Name/Title	Summary	Pict.	Concept Definition
Build a communication channel with the government to communicate diverse situations, like someone who died at home or things that citizens have tried to communicate and have not received reply	Make it work with the Verification and Transports API.		Secondary
Build portable hospitals with collapsible containers and previously purchased mobile equipment	<p>-With "home" containers like these https://www.youtube.com/watch?v=h4CQYfOQgoQ These are worth about 1500 USD</p> <p>Or with these if material is missing: https://www.youtube.com/watch?v=uu0pNckSNNc This, according to the author, is 15 million pesos, about 3766 USD.</p> <p>- "plastic beams" or similar that can support the weight of the container and make a foundation to prevent water from entering the rooms.</p> <p>-Kits with UVC to disinfect the water. https://www.youtube.com/watch?v=YCp8PHfHSxU</p> <p>With the balls that are worth about 34 cent. USD could also improve water quality in open areas or if you have to mount open ponds for some reason. https://www.youtube.com/watch?v=FDuSrlm_Nfc</p> <p>Also some industrial osmosis equipment, with that we would have a complete filtration equipment.</p> <p>-Solar plate kits combined with batteries and generators. These are the emergency kits they have on average.</p> <p>https://www.youtube.com/watch?v=sgOnimsx8DU Anyone who sees what is happening in Europe will see that it is obvious that this will be ineffective in the face of so much demand by the sick.</p> <p>-Use tesla Powerwalls, and if they are scarce</p> <p>-These DIY cases could be a good solution with these NCM 811 for their greater autonomy. https://www.youtube.com/watch?v=bn0KtdrpoEM</p> <p>Unfortunately here we would have to allocate a lot of funds to battery packs that seem to be the best solution so far. ** Develop more with engineers.</p> <p>Expenses would have to be evaluated and managed to be as tight as possible.</p>		Secondary
Buy portable equipment fans, monitors, ultrasound machines,	Ideally, they have a Wi-Fi connection to be able to develop apps that allow viewing of several of these devices on the same TV screen..		Secondary
Chatbot that has a forward-to-operator button in case is needed	We will have a chatbot that will respond to the most trivial answers, but without forgetting that specific cases may require personalized attention.		Secondary
Collaborate with public transport (trains, buses, etc.) so that they yield part of their transportation space of passengers to transport goods.	<p>The government says it has empty passenger trains (arguing that the quarantine works) well take advantage of these transports to transport goods.</p> <p>We just need a government that trusts us and does it well so that the rest also will.</p>		Secondary
Create a Call Center attended by volunteers to help improve the citizen service and alleviate lines	<p>One of the most important things from a human point of view and above all when it comes to volunteering is that the best payment is the appreciation of the person who you help. For that reason, and although I am sure that they will receive millions of acknowledgments, will put a button on the "client" side at the end of the call with several options to thank so that in case we have forgotten thanking the other person, they can feel rewarded.</p>		Secondary

Name/Title	Summary	Pict.	Concept Definition
Create a Knowledge Base with resources so that any volunteer can specialize in the field of their choice.	<p>Make available to any volunteer the necessary means to perform the function that it has been assigned for.</p> <p>Existing and / or personalized video courses, such as in the case of dealing with people, in these cases healthcare providers will be requested who have already experienced the situations and problems in order to help with more efficiency.</p> <p>Books to expand knowledge on the specific subject to work (make a digital library of needed material).</p> <p>And a guide of predetermined steps, in case someone is very lost. That guide will first be filled with the most recurring cases, procedures and necessary contact information, etc.</p>		Primary
Create a part of the web in case some celebrity supports us, so that they can leave a message to help us	Put an address for donations and videos of the works carried out. or messages of thanks from the people we have helped.		Secondary
Create a program for governments where we would send information about the person, the merchandise and the route so it can be quickly authorized and checked by the necessary personnel.	<p>A program that communicates through an API to which we send the operations executed if necessary.</p> <p>In case of discord, for example, if there is an order for masks from a hospital and we are going to fulfill it and they call us to send them somewhere else.</p> <p>THIS WILL ONLY BE DONE IF THE ONGOING GOVERNMENT PROVIDES EVIDENCE OF WHO IS SENDING SUCH GOOD AND SHOULD CONTRIBUTE TIME AND QUANTITY IN THE SAME WAY WE WOULD DO IT; IN CASE OF NOT PROVIDING DATA AND REQUESTING DEVIATIONS, THEY SHOULD KNOW BEFOREHAND THAT WE WILL REFUSE ARGUMENTING THE URGENCY OF THE SITUATION.</p> <p>If some government, instead of collaborating, tries to hinder, it must know that we can refuse to share shipping information (We will NOT put an obstacle to verify the volunteers to avoid scammers or undesirable people).</p>		Secondary
Create a schedule control system and history for volunteers, which specifies time and actions taken by them	<p>This will be done for the purpose of IN THE HYPOTHETICAL CASE OF GETTING SUFFICIENT FUNDS, rewarding the work of the volunteers for their effort and dedication, this cannot be verified until "our work has finished". (I REPEAT I'M TALKING HIPOTETICALLY, the payment will logically be prioritized to those with more hours worked.</p> <p>I REPEAT, SADLY TODAY, I STILL DONT HAVE ANY SCHEME THAT CAN GUARANTEE INCOME.</p>		Secondary
Create a verification method so that any volunteer can be verified as our partner and avoid scammers	<p>This should include several types of verification. Ideally, in the video call, the volunteer's identity card appears, and a hash generated by the system that must match the same hash that gets the receiver.</p> <p>It must also have an alert and complaint mechanism by the receiver. If there is anything unusual, the receiver will save the collected data and send it to the web for its subsequent phishing attempt claim.</p> <p>It is about preventing any malicious person from trying to take advantage of the situation or steal necessary equipment</p>		Secondary
Design apps that can be easily implemented by windows based medical centers	<p>Apps that can be installed on old computers, which are autonomous on the computer that is installed and do not send information other than to the doctor and the patient. Apps that use free video conferencing systems and that can send a previous report written by the patient, which in turn, connects by API with the doctor's local system</p> <p>to contrast and confirm the information to better serve the patient. They can send the doctor's prescription in digital format to the patient if necessary and has an easy option to forward to the pharmacy or print it.</p>		Secondary
Develop an enrollment process of volunteers where the candidates choose amongst the available positions or to follow a system guided questions to help guide them where they could best collaborate according to their answers	<p>That allows people who know what they want to choose their experience, but that also allows to guide someone who wants to collaborate but has not clarity where.</p> <p>The guided system will ask questions about personality, what they would like to do the most, hobbies that define the person and will have the possibility of uploading a CV.</p> <p>The system will be flexible, that is, if someone feels that they are not being useful where they are assigned to or that they could be more useful elsewhere, the system must allow for the change.</p> <p>If it is somewhere delicate, it should be accessed with certain limitations at the beginning, and once the volunteers have achieved ease or the necessary skills, allow them to fully develop their functions.</p>		Secondary

Name/Title	Summary	Pict.	Concept Definition
Forum to propose ideas	<p>I want everyone who can to join us here.</p> <p>The important thing is not to stop asking yourself questions and remember that logic will take you from A to Z; Imagination will take you everywhere.</p> <p>Hopefully the volunteers who help out, will be more aware and creative, being face to face with problems.</p> <p>With a voting system to be able to decide which projects, if there are so many that we cannot cover them all.</p>		Primary
Forum to propose solidarity campaigns (crowdfunding)	<p>Many people are doing solidarity initiatives without any means, if we are successful, create a crowdfunding system and try to financially support whenever is possible.</p>		Secondary
Get an official letter or authorization so that police, army or any public sector don't put obstacles.	<p>Obtain permission, as if it were an international organization, so that everything runs smoothly.</p> <p>And that the current government urges all its dependencies to collaborate actively. Creating a letter to their staff, explaining that they collaborate with us and creating methods by which our staff will be verified before the duty officer.</p> <p>Nothing can be done if at every step they are hindering or need to check at every stage if we are authorized.</p> <p>NOTE that it does not mean that they are not identified (look at the verification part / authentication in the web), all will have to be identified in each timing and volunteer data needs to be reviewed by the government to avoid problems.</p>		Secondary
Get funding and narrow collaboration to facilitate phones or business contact media, laboratories and management offices to conduct operations with fluency and not suffer unnecessary delays.	<p>We need close collaboration with everyone, that includes governments, maybe we will need infrastructure that can be transferred, collaboration with laboratories or universities. Depends on how things are for transportation we might need a communication channel with the army so that they do not impede the transport of the goods.</p>		Secondary
Get funding and volunteers			Primary
Get help from companies like technical assistance and donations of material or help from your foundations	<p>This part is very important in the project, we need companies to share part of their know-how to minimize damage and be able to give a faster response or more effective solution</p>		Secondary
Help improve the processes of detection, care and attention time to the patients			Secondary
Improve sanitary processes to improve detection and avoid unnecessary infections.	<p>Many hospitals, whether by age, by equipment, or by the hospital's methodology, have deficiencies that end up slowing it down attention or making it deficient. Sometimes these processes can be improved with a little imagination and a few means. That is what we are going to focus on, if ever the problem is the lack of a specific machinery we will try to get a portable version of it.</p> <p>This will be deepened when we will have a team thinking about it 24/7. And announcing what we get on the web.</p> <p>It would also be necessary to make statistics by hospital of where there has been more or less infections and what procedures have been followed, because being realistic, each hospital operates differently according to their directives and their means. This would allow to quickly identify faulty processes and correct them or correct them as far as possible,</p> <p>I HOPE TO HAVE THE HELP OF THE HEALTH WORKERS THAT HAVE BEEN ON THE GROUND AS THEY KNOW BETTER THAN ANYONE THEIR DOMAINE. AND IF WE HAVE ENOUGH RESOURCES, SEND PERSONNEL TO EXAMINING IN SITU, AS THIS WOULD ACCELERATE THINGS A LOT. DEAF EARS SHOULD NOT BE MADE TO ALL THOSE VOICES THAT ARE CRYING FOR IMPROVEMENTS THAT NEVER COME.</p>		Primary

Name/Title	Summary	Pict.	Concept Definition
Install systems that ease the burden of health personnel as distance monitoring of multiple patients	<p>For example, it would be great to get the collaboration of Mindray to implement part of their software on DIY medical hardware if there are no means or equipment due to lack of stock</p> <p>https://www.youtube.com/watch?v=pcw--mRRnIc</p>		Secondary
Make a part of the web where people can file complaints of people who are taking advantage of the chaos.	<p>We will make a section on the web to denounce all those who take advantage of the chaos, by ripping off and robbing people. And we will send them to the police because you have to be miserable to be ripping off others while people are dying.</p>		Secondary
Make a portal to link all the COVID-19 related collaborative projects	<p>There are many very useful projects scattered, we will try to collect them all on a single website so that if people see an interesting one they can get to know it, join or even ask for funds (in case it went very well and we could allocate funds to those projects). This would be done with the checks and balances that correspond, from a verified volunteer and prior videoconference with the authors of the project.</p> <p>Organize them by categories in the simplest and most efficient possible way.</p> <p>Like DIY Coronavirus Makers respirators or diving masks adapters in ISINNOVA, these people deserve everyone to know them and to help them.</p> <p>Unfortunately, we always need to avoid scams, but we should not impose a rigid and inflexible model when the situation is urgent.</p> <p>Of course, not everything in life is work and there will be many idle people looking for leisure proposals, so we will add them.</p>		Secondary
Make a portal where hospitals without means can ask and companies that want to donate or help can do it	<p>A platform to coordinate companies that can provide material with hospitals that need it. And if we need to organize door-to-door logistics.</p> <p>With this we could avoid the chaos of people who want to donate and cannot, and material that should come and never comes.</p>		Secondary
Make a resource center in case an idea does not pass the first screen, but people consider that it is still valid	<p>To make sure that no good idea is left behind. A place where they can have visibility in case they go unnoticed. These projects will get to volunteers and be evaluated by at least 3 to 5 people to accept them or discard them.</p>		Secondary
Make one-piece suits that can be dipped in bleach	<p>The idea is that they can be reused by dipping them into a barrel of bleach.</p> <p>* See possible negative effects of excess sweating caused by impermeability.</p>		Secondary
Make them give us the certificates or licenses necessary to be able to have more medications and get medications not supplied without prescription.	<p>Lawyers, managers and pharmacists would come in here. Although we would like to skip some laws in order to streamline processes, it's not possible. Instead we can try to streamline the bureaucratic process so that it does not take weeks or months as it takes sometimes.</p> <p>WE DO NOT HAVE THAT TIME.</p> <p>With the help of pharmacists, administer the reservoir and pay close attention to orders to avoid running out of supplies (in the current situation includes constantly searching for suppliers)</p>		Secondary

Name/Title	Summary	Pict.	Concept Definition
Manufacture disinfecting cabinets with UVC light and ozone designed to clean work suits and PPE **	<p>Initially make cabinets with existing material such as the following: https://www.youtube.com/watch?v=wn2VfRgUCIQ</p> <p>Add UVC light and small ozone generators in order to achieve the desired disinfecting effect.</p> <p>Interior Mylar is UV resistant to some extent ** CHECK ACCEPTABLE USES.</p> <p>Install security measures such as a light signal and timers that indicate that it is working, to prevent accidental opening as exposure to light can cause blindness and cancer, as it breaks DNA chains.</p> <p>After having the prototypes send some to laboratories where they can improve the process.</p> <p>Like tightness, safety and efficiency, and finally improve the mass manufacturing process.</p> <p>Approx. Price: 240x120x200cm 900D mylar water proof hydroponic grow tent \$ 84.00 - \$ 88.00 (reference price, we will search manufacturer to reduce final price of the product)</p> <p>It remains to see and calculate the rest of the prices, price UVC bulb 20-30 \$ approx.</p>		Primary
Manufacture disinfection systems of hospital rooms with UVC light and ozone (disinfect the air)	Make kits with safety measures to disinfect rooms and air conditioning machines, to disinfect the air of hospitals or public rooms with influx of people or working personnel.		Secondary
Manufacture of desinfection tools	Set up manufacturing positions and get collaboration from companies. Share the product creation standards to coordinate production and be able to supply quickly.		Primary
Manufacture UV soaps and lamps to do visual hand checks in hospitals	<p>Make soaps with reactive powders to UV light (not UVC light but a more harmless one, they have different frequency) and UV light lamps and install these kits together with disinfectant liquid dispensers, so that exposed public personnel can visually check the cleanliness of their hands.</p> <p>https://www.youtube.com/watch?v=-LKVUarhtvE MInuto 1:51</p>		Secondary
Once hospitals are supplied,make them for homes	Prioritize Hospitals and public places where workers are exposed daily like police, firemen, etc. This will prevent many unwanted infections.		Secondary
Organize a logistics center (call center and ticket system) with the help of local companies and an App to certify shipments	<p>Through the authentication system mentioned in another section by which companies can trust us and with the help of small distributors, companies, and the public transport, we will create a parallel distribution system.</p> <p>By creating a trusted system, we can create a fast and trustworthy logistics system. And to achieve it, we have to avoid defrauding anyone at all costs.</p>		Secondary
Present a section where the methods of the countries that have best controlled the disease are published so that any country can apply them	<p>This is basically to follow the decision made by Alibaba and go further.</p> <p>PS: try to work together with them as much as possible.</p>		Secondary
Project Pandora			Main Topic

Name/Title	Summary	Pict.	Concept Definition
Search and catalog all the information that can be useful to expose it to the world	<p>Like the website that Alibaba's have put up to help treat COVID-19 with a very complete manual of measures to be taken by hospitals and governments https://lcovid-t.9.alibabacloud.com/</p> <p>Projects that are useful for the benefit of all. I which everyone can know about them and be a part of them.</p> <p>The information should be verified by several people who know the field under discussion, that is, if it is supposedly scientific information that it be verified and validated by several expert volunteers on the subject.</p>		Secondary
Secondary (Idea 22)			Secondary
Start a crowdfunding campaign			Primary
Talk to governments to get cooperation and financing	<p>We need close collaboration with everyone, that includes governments, maybe we will need infrastructure that can be transferred, collaboration with laboratories or universities. Depends on how things are for transportation we might need a communication channel with the army so that they do not impede the transport of the goods.</p>		Primary
Testing alternative communication systems, walkies, mobile apps, etc.			Secondary
That they collaborate with small carriers that will carry and collect goods from ports and airports to other public building or hospitals. Creating a paralel distribution channel to optimize the flow of goods	<p>The idea is to make a kind of Just EaT, Glovo, Deliveroo with vans of freelancers who are unemployed and with several supermarket companies, trucks or transportation that want to promptly transfer part of their vehicles for punctual deliveries.</p> <p>Do not forget about the renting companies and people without vehicles, but with extensive experience (shaping this idea)</p> <p>WITH WHAT WE HAVE SEEN IN SPAIN IT IS CLEAR THAT THE CENTRALIZATION OF LOGISTICS DOES NOT WORK, WHAT IS TO BE APPLIED IS A PARALLELIZATION OR A CAPILARIZATION OF LOGISTICS, THAT IMPROVES ITS EFFICIENCY INSTEAD TO DECREASING IT.</p>		Secondary
This would allow at risk health personnel (over 60 years old or with health conditions) to work from a more remote and "safe" place without putting themselves at risk			Secondary
Translate all useful information to every possible language to serve everyone anywhere in the world	<p>This is very important especially in certain languages where a lot information does not usually arrive because it is not translated, for example, I do not see Chinese, Korean or German news being reported. They could help, like for example disinfection tools implemented by the Chinese government. There is much information and it seems that Europe has received very little ...</p> <p>I would bet that no Spanish hospital is taking strict measures to purify the air conditioning system. (If I am wrong, please let me know as soon as possible)</p> <p>Translators from all languages will be required.</p>		Secondary
Use social media to search for volunteers			Secondary
UVCs and Small ozone devices to clean cars	<p>Manufacture devices for effective cleaning of transport vehicles.</p> <p>(Please do not try to do it at home looking at youtube videos and it is necessary to take precautionary measures, as they are extremely harmful to human beings, if used unappropriately)</p>		Secondary
We will have to make a system of payments for volunteering carriers, so they function without paying for the fuel	<p>We will have to make a QR payment system or communication without a card so that carriers can afford the fuel, with the journey predefined and estimated cost and a variant marker + -25% in case the load is heavier and the stipulated consumption increases.</p>		Secondary

Name/Title	Summary	Pict.	Concept Definition
Web page	<p>*EVERYTHING SEEN HERE MAY BE SUBJECT TO CHANGE FUTURES, EITHER BY NEEDS OR BY FUNCTIONALITY. IT'S MORE AN ORGANIZATIONAL SCHEME OF WHAT THE WEB SHOULD BE LIKE. FINAL FORMAT IT WILL HAVE.</p> <p>The website will include the functions described separately below plus all the bottom tabs.</p> <p>The web map for the citizen part would look something like this:</p> <ul style="list-style-type: none"> -News. (The measures taken by the project will be exposed here or in a separate tab) -Improved procedures. As we improve, we will be putting solutions here. -Prevention. -Procedures in case of being sick. -Statistics. -Treatments. (we have seen the poisonings in Nigeria and we will... bring it up for debate, let's remember that the medications that can work ARE TOXIC and self-medicating can be deadly, as Paracelsus said "Nothing is poison, everything is poison: the difference is in the dose ».) -Aftermath. -Leisure. -Individual's charitable acts. -Companies charitable events/campaigns. -Forum to propose ideas and solutions (where people can vote, this will help us to select the best projects) and since there is no perfect system, if someone believes that a good idea has not been well valued, we will send it to a resolution center where a second screening will be done by workers. -Forum to propose charitable campaigns that will also link to the web and / or from people and companies that can provide help in any way. (Like a crowdfunding page, but without charging% of the projects) <p>Physician Part (will require verification):</p> <ul style="list-style-type: none"> -More effective triaje -With medical studies. -Statistics. -Innovative treatments. -Possible treatments. -Digital Resources to download, (books, software, etc). -Ask for material resources. (by countries and by hospitals specifying quantity and kind) -ideally get the AI software for CT and make one with images of Ultrasound scanners to help diagnose and / or shows improvement or worsening and possible complications. -Appropriate clothing. -Prevention -Measures taken by the CHINESE, KOREAN and GERMAN * (investigate why the latter has such few deaths). Something that few countries are doing, and should learn from them. -Implement a kind of Facebook for them where they can quickly discuss everything else. <p>Business:</p> <ul style="list-style-type: none"> -Where they can make donations. (would link to the database of the material resources requested by doctors) -Where they can put part of their team to collaborate with a project. -Where they can put their Know How at the service of others -Where they can offer to supply a certain missing product for the assembly of something concrete that needs to be mass produced. <p>A backend for volunteers as complete and effective as possible.</p> <p>Of course a banner where all public or private services are posted actively collaborate or if there are many, do so in a separate tab.</p>		Primary
When everything is over, repeat the process with the next disaster, the economy and come up with a new plan	<p>The next project, use the infrastructure already created to help with the next challenge, the global economic depression.</p> <p>Do a new work project, to help and avoid repeating the history as in 1929</p>		Main Topic

Secondary: Develop an enrollment process of volunteers where the candidates choose amongst the available positions or to follow a system guided questions to help guide them where they could best collaborate according to their answers

Name/Title		Pictogram
Develop an enrollment process of volunteers where the candidates choose amongst the available positions or to follow a system guided questions to help guide them where they could best collaborate according to their answers		
Tech-Name		
Develop_an_enrollment_process_of_volunteers_where_the_candidates_choose_amongst_the_available_positions_or_to_follow_a_system_guided_questions_to_help_guide_them_where_they_could_best_collaborate_according_to_their_answers		
Summary		
That allows people who know what they want to choose their experience, but that also allows to guide someone who wants to collaborate but has not clarity where.		
The guided system will ask questions about personality, what they would like to do the most, hobbies that define the person and will have the possibility of uploading a CV.		
The system will be flexible, that is, if someone feels that they are not being useful where they are assigned to or that they could be more useful elsewhere, the system must allow for the change. If it is somewhere delicate, it should be accessed with certain limitations at the beginning, and once the volunteers have achieved ease or the necessary skills, allow them to fully develop their functions.

Make them give us the certificates or licenses necessary to be able to have more medications and get medications not supplied without prescription.		
Tech-Name		
Make them give us the certificates or licenses necessary to be able to have more medications and get medications not supplied without prescription.		
Summary		
Lawyers, managers and pharmacists would come in here. Although we would like to skip some laws in order to streamline processes, it's not possible. Instead we can try to streamline the bureaucratic process so that it does not take weeks or months as it takes sometimes. WE DO NOT HAVE THAT TIME.		
With the help of pharmacists, administer the reservoir and pay close attention to orders to avoid running out of supplies (in the current situation includes constantly searching for suppliers)

Name/Title	Pictogram
Manufacture disinfecting cabinets with UVC light and ozone designed to clean work suits and PPE **	
Tech-Name	
Manufacture_disinfecting_cabinets_with_UVC_light_and_ozone_designed_to_clean_work_suits_and_PPE____	
Summary	
Initially make cabinets with existing material such as the following:	
https://www.youtube.com/watch?v=wn2VfRgUCIQ	
Add UVC light and small ozone generators in order to achieve the desired disinfecting effect.	
Interior Mylar is UV resistant to some extent ** CHECK ACCEPTABLE USES.	
Install security measures such as a light signal and timers that indicate that it is working, to prevent accidental opening as exposure to light can cause blindness and cancer, as it breaks DNA chains.	
After having the prototypes send some to laboratories where they can improve the process.	
Like tightness, safety and efficiency, and finally improve the mass manufacturing process.	
Approx. Price:	
240x120x200cm 900D mylar water proof hydroponic grow tent \$ 84.00 - \$ 88.00 (reference price, we will search manufacturer to reduce final price of the product)	
It remains to see and calculate the rest of the prices, price UVC bulb 20-30 \$ approx.
